DETAILED ACTION

Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-5, 8, and 9, drawn to methods of producing a local immunological response against a pathogen in a buccal mucous membrane, wherein the pathogen is HIV, classified in class 424, subclass 208.1.
 - II. Claims 1-5, and 7, drawn to methods of producing a local immunological response against a pathogen in a buccal mucous membrane, wherein the pathogen is a herpesvirus, classified in class 424, subclass 229.1.
 - III. Claims 1-5, drawn to methods of producing a local immunological response against a pathogen in a buccal mucous membrane, wherein the pathogen is a candidae, classified in class 424, subclass 274.1.
 - IV. Claims 1-5, and 7, drawn to methods of producing a local immunological response against a pathogen in a buccal mucous membrane, wherein the pathogen is a hepatitis virus, classified in class 424, subclass 225.1.
 - V. Claims 1-5, and 7, drawn to methods of producing a local immunological response against a pathogen in a buccal mucous membrane, wherein the pathogen is a picornaviridae, classified in class 424, subclass 216.1.
 - VI. Claims 1-5, and 7, drawn to methods of producing a local immunological response against a pathogen in a buccal mucous membrane, wherein the pathogen is a reovirus, classified in class 424, subclass 215.1.

Application/Control Number: 09/746,581

Art Unit: 1648

VII. Claims 1-5, drawn to methods of producing a local immunological response against a pathogen in a buccal mucous membrane, wherein the pathogen is an adenovirus, classified in class 424, subclass 233.1.

- VIII. Claims 1-5, drawn to methods of producing a local immunological response against a pathogen in a buccal mucous membrane, wherein the pathogen is human papillomavirus, classified in class 424, subclass 204.1.
- IX. Claims 1-5, drawn to methods of producing a local immunological response against a pathogen in a buccal mucous membrane, wherein the pathogen is a cytomegalovirus, classified in class 424, subclass 230.1.
- X. Claims 1-5, drawn to methods of producing a local immunological response against a pathogen in a buccal mucous membrane, wherein the pathogen is an Epstein-Barr virus, classified in class 424, subclass 230.1.
- XI. Claims 1-5, and 6, drawn to methods of producing a local immunological response against a pathogen in a buccal mucous membrane, wherein the pathogen is an aerosol transmitted pathogen, classified in class 434, subclass 234.1.

For Group XI above, restriction to one of the following is also required under 35 USC 121. Therefore, election is required of one of Groups I-XI, and, if Group XI is elected, then election is also required to one of inventions (A)-(E). Subinventions (A)-(E) represent the inventions of Group XI wherein the aerosol transmitted pathogen is selected from:

- (A) M. tuberculosis;
- (B) N. meningitides;
- (C) Streptococcus type B;
- (D) S. pneumoniae; or
- (E) B. pertussis.

The inventions are distinct, each from the others, for the following reasons:

Application/Control Number: 09/746,581

Art Unit: 1648

2. The inventions of Groups (A)-(E), and of I-XI are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, the different inventions each describe methods of inducing a local immune response against a different pathogenic organism. They therefore perform different functions.

Conclusion

- 3. Because these inventions are distinct for the reasons given above, have acquired a separate status in art because of recognized divergent subject matter and different classifications, and because the literature and sequence searches required for any one of the groups is not required for the others, restriction for examination purposes as indicated is proper.
- 4. It is here noted that some of the restrictions requirements made above fall within the scope of PTO Linking claim practice. In accordance with this practice as described in MPEP 809.03, linking claims will be considered with the elected invention. If the elected invention is found allowable, the linking claim will also be examined. If no substantive rejection is found for the linking claim, the restriction among the Groups it comprises will be withdrawn.
- 5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the

Art Unit: 1648

application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the 6. examiner should be directed to Zachariah Lucas whose telephone number is 703-308-4240. The examiner can normally be reached on Monday-Friday, 8 am to 4:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, James Housel can be reached on 703-308-4027. The fax phone numbers for the organization where this application or proceeding is assigned are 703-308-4242 for regular communications and 703-872-9307 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-0196.
